

# WFL: Laser fork sensors

A complete range of 21 sensors with the following features is available:

- fork widths between 2 and 120 mm, fork depths of 40, 60 and 95 mm,
- simple and quick adjustment via Teach-in,
- switching output PNP and NPN,
- L/D adjustable via button,
- rugged metal housing with glass optics,
- shortest response time,
- very high resolution.

**T**he prime features of the laser fork sensor family are very high speed response time and also an extremely accurate focused laser beam. Sender and receiver are fitted into the same housing, thereby operating on the through-beam sensor principle. This allows and guarantees the highest positional accuracy.

Due to the extremely fast response times and very high resolution, the sensors are particularly suitable for detecting very small objects, such as needles. Additionally, they can be used for the detection of transparent objects.

Fork sensors

- Very high resolution
- Simple setting using 2-point Teach-in
- Rugged aluminium housing
- High switching frequency for accurate positioning
- Precise and thin laser spot

**Dimensional drawing**

All types

**Adjustments possible**

All types

- 1 Optical axis
- 2 Mounting holes, Ø 4.2 mm
- 3 WFL50/80/120 only
- 4 Function indicator (red)
- 5 Function indicator (yellow), switching output
- 6 "+"/"- buttons and function button

**Dimensions**

Dimensions (mm)	A Fork width	B Fork depth	C

## Teach-in: adjusting the switching threshold

- The material speed during Teach-in must equal zero (machine stationary).

### 1st operation

- To enter Teach Mode push both buttons (“+” and “-”) for 1 second (no object).
- After the first Teach-in operation, the red function indicator flashes slowly and signals that the second Teach-in operation must now be initiated.

### 2nd operation

- Briefly operate the “-” button (on carrier material or without scanned object).
- After the second Teach-in operation, the red function indicator extinguishes.
- The Teach-in operation was unsuccessful if the red function indicator flashes.

### Notes

- **+** Following completion of the Teach-in operation, the switching threshold can be further adjusted by the “+” or “-” button at any time. For slower adjustment, press the “+” or “-” button once. For faster adjustment, the finger remains on the “+” or “-” button.
- **± 0/0** By simultaneously pressing the “+” and “-” buttons (3 seconds), the unit can be locked against unintentional adjustment.
- **± L/D** By simultaneously pressing the “+” and “-” buttons (6 seconds), the switching function (light/dark) can be inverted. Default setting: light switching.
